

What's New in Cayosoft Administrator V4

Content:

New Features

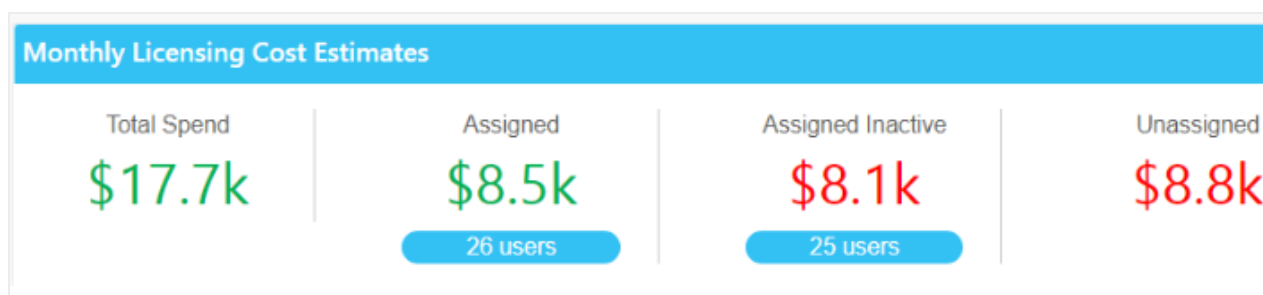

Attention Needed Alerts

Both Automation Console Users, and Day-to-day Administrators using the Web Portal, benefit from an improved experience and simplified interfaces. New home pages provide faster access to commonly used features and help new users perform a task more quickly.

Office 365 Secure Score Runbook Templates

Office 365 Secure Score is a security assessment tool that helps Office 365 customers improve tenant security. Cayosoft Runbooks for Secure Score provide critical visibility and enforcement for enterprises so they can better interpret and improve the score assigned by the Secure Score Tool. Further, a Cayosoft Runbooks for Secure Score can automatically & continuously report on Secure Score settings thereby increasing the overall Secure Score over time.

Advanced Office 365 Management Features

- Cost-Benefit Analysis over License Analysis
- Azure Active Directory Authentication for full stack management from the cloud
- Office 365 Licensing Adoption, Change and Cost Modeling Analysis
- Existing license assignments Analysis for migration to Automate License Assignment

Simplified Replacement of ONEIdentity/Quest* ActiveRoles product

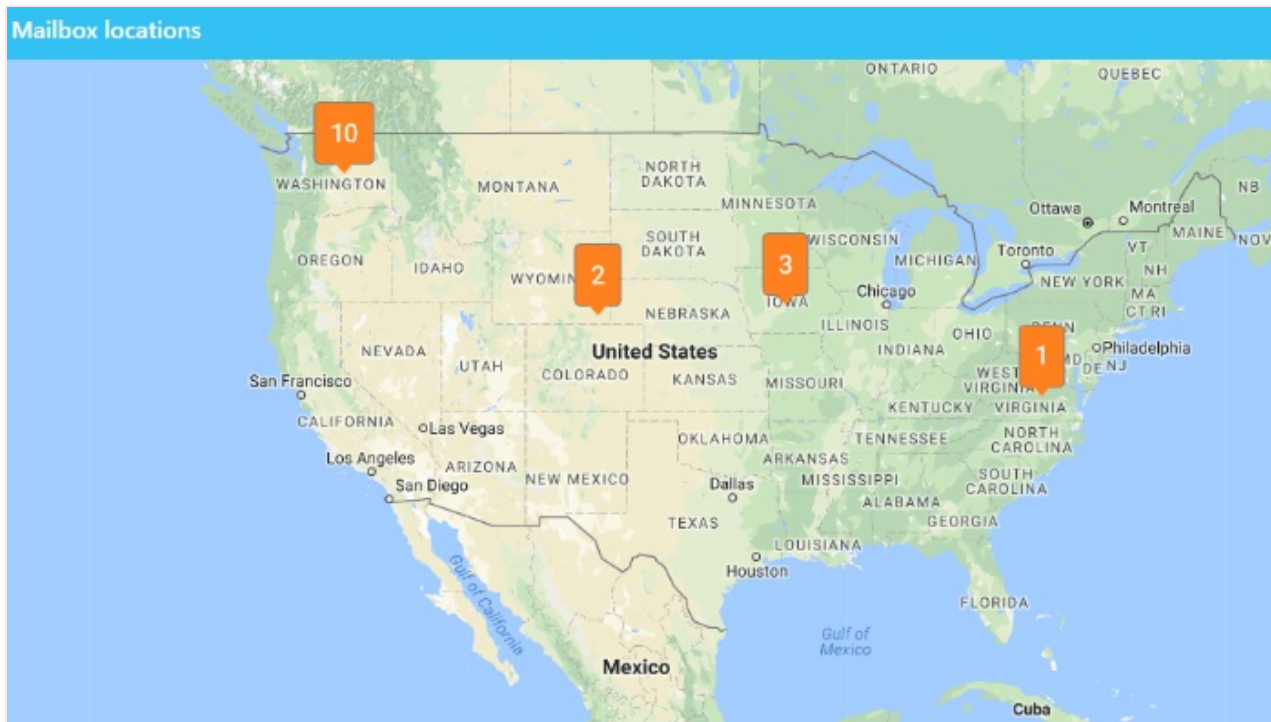

- Simplified Multi-Domain Search & Management
- Global Provisioning Policies

- Best in class Hybrid without additional products
- Change Audit Improvements

See details here about the [Cayosoft Quest Replacement Offer](#).

Mailbox Location Dashboard

For data security and compliance reasons, many organizations require user mailboxes and data be stored within specific countries. To make this simpler to monitor, Cayosoft Administrator now includes a web portal dashboard that displays a map showing each Microsoft Data Center and the number of mailboxes deployed therein.

Improved Support for Microsoft Server 2016 Technologies

Cayosoft Administrator 4.x now support deployments on Windows Server 2016, management of Active Directory on Windows Server 2016, and Exchange 2016 recipient management. Timely support for new releases of Microsoft platform is critical to many customers because the applications and services they commonly deployed in private clouds are dependent on keeping these platforms up-to-date. Unlike legacy tool vendors, Cayosoft strives to be first — or among the first — to add support for newly released versions.

BitLocker Encryption Recovery Information

The Cayosoft Administrator web portal now includes BitLocker full disk encryption recovery

details for computer objects. By providing delegation over Bitlocker details, trusted administrators can now be empowered to recover data without granting overly powerful native permissions and without running dangerous scripts.
